ATTENTION
THIS CHART CONTAINS OFF-ROUTE OBSTRUCTION CLEARANCE ALTITUDES (ORCA).
The off-route obstruction clearance altitudes shown in quadrangles bounded by solid lines of latitude and longitude are represented in the ORCA and are based on the highest known terrain in each quadrangle, including terrain and obstructions. ORCA provides obstruction clearance with a 1000 foot buffer in designated non-maintenance areas and a 2000 foot buffer in designated maintenance areas within the United States. For areas in Mexico and the Caribbean which are located outside of the U.S. ADZ, ORCA provides obstruction clearance with a 2000 foot buffer. This altitude is provided for obstruction clearance only. It does not provide for NAVAID signal coverage or communication coverage, and would not be consistent with altitudes assigned by Air Traffic Control.

Example: 12,500 feet
